

This scatter plot, titled "Alabama", displays the relationship between a variable on the y-axis and the "t2m mean" on the x-axis. The x-axis ranges from approximately 5 to 30, with major ticks at 10, 20, and 30. The y-axis ranges from approximately -10 to 10. The data is divided into two groups: blue points and red points. The blue points are concentrated in the lower-left region, with t2m mean values between 5 and 15 and y-values between -5 and 5. The red points are concentrated in the upper-right region, with t2m mean values between 15 and 30 and y-values between 0 and 10. Both groups have multiple fitted curves of the same color, showing a non-linear relationship. The blue curves generally show a slight increase or plateau, while the red curves show a more complex pattern with several peaks and troughs.
